[A mathematician once confided

That a Möbius band is one-sided;

And you'll get quite a laugh

If you cut one in half,

For it stays in one piece when divided.

To understand this limerick, take a strip of newspaper, about six inches wide and two or three feet long, and scotch-tape the ends together, giving one end a 180 degree twist beforehand. With a magic marker, draw a highway line down the middle; when you come back to where you started, you will find that both sides of the strip have been marked. Now cut down this line with a pair of scissors. The last line reminds one of the Quebec separatist idea of sovereignty-association.]
